

COVID - 19

WHAT YOU NEED TO KNOW

What is it?

COVID-19 stands for the disease caused by the new strain of coronavirus that originated in Wuhan, China.

It has now spread to most countries around the world, including those in Africa.

How does it spread?

Once in humans, coronaviruses can spread to other humans through:

Air transmission

e.g. inhaling droplets released from coughing, sneezing or spitting by an infected person

Direct contact with an infected person

e.g. shaking hands and then touching your face

Infected surfaces

e.g. touching an infected surface and then touching your face

What are the symptoms?

The most common symptoms are fever, tiredness, and dry cough. These are usually mild and begin gradually, or there may be no symptoms at all.

Most people don't need specialised care to recover from COVID-19. However, people over 60 and those with underlying medical conditions are at greater risk of complications.

FEVER

Diarrhoea

TIREDNESS,
ACHES &
PAINS

Headache

A runny nose

DRY COUGH

SHORTNESS OF BREATH

People with fever, cough and shortness of breath **should seek medical attention.**

How can I prevent getting infected and spreading the virus?

Wash your hands often using soap and water or alcohol-based hand rub for 20 seconds.

Stand at least 2 metres away from other people when you are in public.

Use a protective face mask when going into public, including when using public or private transport in addition to hand washing and social distancing. **Masks do not necessarily protect the wearer, but protect others if you are infected but not showing symptoms.**

Avoid touching your face especially your eyes, nose and mouth.

Clean and disinfect surfaces that are frequently touched, e.g. door handles and table surfaces.

Avoid eating raw or undercooked animal products.

Cover your mouth and nose when coughing and sneezing with a tissue or the inside of your elbow. **Throw the tissue away immediately** in a closed bin and wash your hands.

Avoid travel if you have a fever or cough, and check your country's travel advisory.

Fit the mask firmly over your nose and mouth and do not touch it once it's on.

Replace it with a new one once it's damp. Remove it from behind, throw single use masks in a closed bin and wash your hands well.

Wash cloth masks immediately in warm soapy water and then iron after for extra sanitisation.

Stay at home if you are sick.

What is Heritage doing

Every one of our members matter to us. We will continue to monitor developments on COVID-19 and to keep you updated.

If you have flu-like symptoms and recently travelled to a high-risk country for COVID-19, or you have had contact with someone who recently travelled to such a country, please seek medical care. Call your healthcare provider, who will advise you what to do, and share your travel history. Alternatively, please contact the hotline for your country's Health Ministry or its designated health authority who are co-ordinating the response to COVID-19:
